

SAFEGUARDING RULES ON CAMPUS.

INTRODUCTION

Safeguarding policy is a set of rules that is systematically outlined in order to keep people in an organisation out of harm.

Here are some key policies used in AkiraChix campus to make sure everyone is safe from fire

- **Availability of Fire extinguishers around the campus.**

It is important to ensure that there are enough fire extinguishers around the school, depending on its size. This enables it to contain fire incidents efficiently.

- **Switching off of lights and sockets when not in use.**

Current electricity is a source of fire damage, hence it's important to switch off unused lights and sockets in case of excessive voltage that may cause fires.

- **Equipment of cooling machines for server rooms and labs.**

Computers and machines in labs and server rooms emit a lot of heat and hence, they must be cooled before they reach their igniting points.

- **Ensuring that the campus has well labeled exit points and fire assembly points.**

The design of the campus should accommodate areas where the students and staff can exit in case of fire.

- **Proper training for staff members and students in regards to fire and other first-aid incidents.**

Everyone in the campus should be properly trained on ways to handle fire situations and first aid.
